Advantages of Building with CROWN ICF

Reduce the number of trees cut down and use far fewer natural resources to heat and cool your home.

The thermal properties of concrete reduces temperature swings on your home.

Maintain cleaner indoor air quality by reducing dust, pollen, allergens, and molds in your home. Air Exchange systems also reduce humidity.

Between the double layers of foam and concrete your home will block out nearly all outside noise.

ICF has an equivalence of R-value 50. Making your home 3x as energy efficient as standard homes

Hurricanes, tornados, and fires completely level standard homes, but do very little damage to an ICF home.

Reduce your energy bill, lower your maintenance costs, and add a greater resale value. You can apply for energy efficient tax credits and an energy efficient mortgage. When you factor these savings each month, most CROWN ICF homes are more affordable than standard stick built homes

SERVING NEW JERSEY, NEW YORK
AND PENNSYLVANIA
